3 ways to get the Session ID

Using SF in VS Code (same as running **sf org display** on Terminal)

```
>org|
```

```
SFDX: Display Org Details for Default Org
```

```
=== Org Description
Access Token     00D                                      .P.
OIVUBTni                           ZJ6
Alias
```

Via VisualForce Page + Apex

```
<apex:page contentType="application/json">
    {!$Api.Session_ID}
</apex:page>
```

```
public class SessionIdHelper {
    public static String getSessionId() {
        return Page.SessionIdVFPaage.getContent().toString();
    }
}
```

Via Debug Log (remove the space when using it)

```
System.debug(
    UserInfo.getSessionId().substring( 0,16 ) + ' '
    + UserInfo.getSessionId().substring( 16 )
);
```
